VORTEX GRIP

Braided over-under straps for dynamic multi-point contact.

THE DESIGN

Sixteen straps wound in opposite directions cross in an over-under braid, leaving deep valleys between them. Every crossing gives the hand an edge to bite on, so the grip works wherever you hold the handle.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a 30.2 × 16.2 mm slot (the measured 30 × 16 mm tongue plus 0.2 mm), 130 mm deep so the paddle seats fully, with a thin 3.4 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

Braided climbing rope and woven leather. The straps twist around the handle the way a rope wraps a post, so your fingers always find an edge that points against a slipping hand.

WHY IT GRIPS

- 8 right-hand and 8 left-hand straps on a 36° helix
- Over-under weave: the top strap alternates at every crossing
- Valleys drop to the thin base wall, which keeps it light

PRINT TIP

Straps rise no faster than 45°, so no supports are needed.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 16 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
