

THE LARGE-FORMAT ADVANTAGE — IN ONE LOOK

ONE PRINT

VS

MANY PRINTS

A standard 220 mm printer must **slice a large model into 12–16 pieces**, then glue, sand, fill and repaint it — adding **₹2,000–4,000 per project** and days of labour, with every glue joint a weak point and a visible seam. The Kobra 3 Max prints the same model on its **420 × 420 × 500 mm (88-liter)** bed as **one seamless piece** — stronger, cleaner, faster, and cheaper at XL sizes because assembly labour disappears entirely.

DEFECTS

STANDARD PRINTER · 220 MM BED

Model sliced into pieces, glued & sanded for hours

KOBRA 3 MAX · 420 MM BED

ONE SOLID PRINT

The entire model printed in a single seamless piece

ZERO GLUE

ZERO SEAMS

ZERO SANDING

FULL STRENGTH

CLIENT-READY OFF THE BED

02 — SAME MODEL, TWO WORKFLOWS

THEIR 5 STEPS vs OUR 2 STEPS

What actually happens between "send file" and "receive part"

THE MULTI-PIECE WAY · 220 MM PRINTER

5 STEPS · 3-5 DAYS

3-5 DAYS · ₹2,000-4,000 EXTRA IN GLUE, FILLER, LABOUR & FAILED JOINTS

SAME MODEL · SAME FILE · DIFFERENT MACHINE

THE KOBRA 3 MAX WAY · 420 × 420 × 500 MM

2 STEPS · 18-24 HOURS

18-24 HOURS · JUST FILAMENT + MACHINE TIME — ZERO GLUE, ZERO SANDING, ZERO LABOUR

Every joint you don't print is a joint that can't fail — one file, one print, one piece.

03 — HEAD TO HEAD

HEAD-TO-HEAD COMPARISON

First the size difference — then every metric that matters

BUILD VOLUME IN LITERS

Total printable space per machine class — the Kobra 3 Max holds 7.3× a standard bed-slinger

SAME SCALE, SIDE BY SIDE

Both build volumes drawn to scale — the whole standard volume fits inside the Kobra 3 Max 7× over
