LOGIC-GRIP

Seamlessly interlocking ergonomic puzzle design.

THE DESIGN

Fifty-six jigsaw pieces tile the grip. Each piece is a shallow pillow separated by fine grooves and locked to its neighbours by mushroom knobs; the knob directions are randomised so no two rows repeat.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a 30.2 × 16 mm slot (the 30 mm wide handle plus 0.2 mm, 16 mm thick), 130 mm deep so the paddle seats fully, with a solid 5 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

Jigsaw puzzles and the satisfying click of the last piece. The surface looks assembled rather than moulded, and the grooves give your fingers lanes to settle into.

WHY IT GRIPS

- 8 × 7 = 56 interlocking pieces
- Mushroom knobs with a 2.9 mm neck and 4.2 mm head
- 0.84 mm grooves, about two nozzle widths wide

PRINT TIP

Grooves are 0.84 mm wide and about 1.6 mm deep.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 16 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
