DESIGN 05 OF 10

NEURO-TREAD

A raised neural network over a dimpled adaptive base.

THE DESIGN

A network of 48 neurons joined by curved axon ridges rises to the full 3.5 mm crest, standing proud of a field of small bumps. The ridges guide the fingers while the bump field adds fine grip.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a 30.2 × 16 mm slot (the 30 mm wide handle plus 0.2 mm, 16 mm thick), 130 mm deep so the paddle seats fully, with a solid 5 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

Neural networks and leaf veins: branching lines that meet at nodes. The ridges read like a map under the palm, while the fine bumps between them work like grip tape.

WHY IT GRIPS

- 48 nodes (8 × 6) joined by curved 1.5 mm ridges
- Bump field on a 2.66 mm hex pitch, 1.4–2.4 mm high
- Network and nodes reach the full 3.5 mm crest

PRINT TIP

Ridges and bumps are gentle slopes, printed in one material.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 16 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
