DESIGN 03 OF 10

TESSEL-BLOCK

Faceted triangular pyramids in staggered rows for enhanced traction.

THE DESIGN

A tessellation of triangular pyramids. Traction comes from many small angled edges rather than one deep texture, and up-pointing pyramids stand taller than down-pointing ones, giving a two-level, gem-like surface.

THE HANDLE

A solid sleeve that slides over your paddle's flat handle: a 30.2 × 16.2 mm slot (the measured 30 × 16 mm tongue plus 0.2 mm), closed at the butt with a 3.5 mm hole for an M3 screw, 132.8 mm long. The outer shape is the same on all ten designs, so you can swap textures freely. A smooth collar at each end keeps the edges kind to your hand.

DESIGN INSPIRATION

Cut gemstones and folded paper. A faceted pattern catches the light at dozens of angles, and under the fingertips each small pyramid is a tiny step your skin can grip.

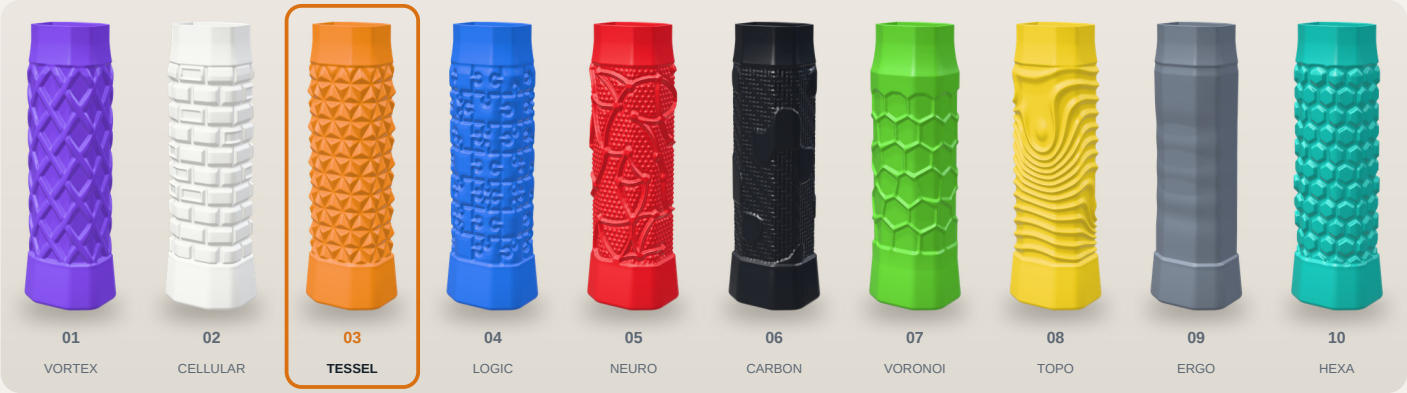

WHY IT GRIPS

- 11 rows of 24 triangles with sharp V-grooves
- Up-pyramids reach 3.44 mm, down-pyramids 3.04 mm
- Every facet slope stays under 45°

PRINT TIP

Facet slopes stay below 45°, so the pyramids print cleanly without supports.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 16 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
