VORONOI-CORE

A Voronoi rib lattice with windows cut through the wall.

THE DESIGN

Irregular Voronoi cells become 2.6 mm ribs with rounded crests, and the cells themselves are open windows through the wall. The grip is ventilated, and the lightest of the ten.

THE HANDLE

A slim sleeve that slides over your paddle handle: closed at the butt, open at the throat, 132.8 mm long and cut to the exact 32.06 × 26.04 mm bore of the reference handle. The fit is identical on all ten designs, so you can swap textures freely. A smooth collar at each end keeps the edges kind to your hand.

DESIGN INSPIRATION

Dragonfly wings, leaf veins and cracked earth: the same branching cells appear wherever nature needs strength without weight. Here they let air reach your palm and make this about six grams lighter than any other design.

WHY IT GRIPS

- 54 through-windows in a 76 mm band
- 2.6 mm ribs standing at the full 3.5 mm crest
- Window roofs trimmed to 60°, longest bridge 3.8 mm

PRINT TIP

Window roofs are trimmed so the longest unsupported bridge is 3.8 mm.
