DESIGN 02 OF 10

CELLULAR MOD

Staggered stacked cells, with pockets for optional inserts.

THE DESIGN

A wall of staggered, individually pillowed cells with chamfered edges. About one cell in five is recessed into a pocket, sized to take an optional insert. In a single colour the pockets read as shadow.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a snug 30.2 × 12.2 mm slot (the 30 × 12 mm handle plus 0.2 mm), 130 mm deep so the paddle seats fully, with a solid 5 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

Brickwork and stacked stone. The staggered joints lock every cell to its neighbours, and the recessed pockets add a rhythm, like windows in a wall.

WHY IT GRIPS

- 10 rows × 8 staggered cells with 1.4 mm gaps
- Three cell heights give a subtly stepped surface
- About 22 % of the cells are recessed 0.7–1.2 mm

PRINT TIP

Cell edges are chamfered and nothing overhangs beyond 45°. Inserts are optional and not included.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 12 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
