DESIGN 03 OF 10

TESSEL-BLOCK

Faceted triangular pyramids in staggered rows for enhanced traction.

THE DESIGN

A tessellation of triangular pyramids. Traction comes from many small angled edges rather than one deep texture, and up-pointing pyramids stand taller than down-pointing ones, giving a two-level, gem-like surface.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a snug 30.2 × 12.2 mm slot (the 30 × 12 mm handle plus 0.2 mm), 130 mm deep so the paddle seats fully, with a solid 5 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

Cut gemstones and folded paper. A faceted pattern catches the light at dozens of angles, and under the fingertips each small pyramid is a tiny step your skin can grip.

WHY IT GRIPS

- 11 rows of 24 triangles with sharp V-grooves
- Up-pyramids reach 3.44 mm, down-pyramids 3.04 mm
- Every facet slope stays under 45°

PRINT TIP

Facet slopes stay below 45°, so the pyramids print cleanly without supports.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 12 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
