DESIGN 10 OF 10

HEXA-MOD

Modular hex pads on four height levels.

THE DESIGN

A honeycomb of individual hex pads, each separated by a 1.7 mm gap and set at one of four heights. The height map is pseudo-random with a gentle swell along the handle; the tallest pads reach the full 3.5 mm crest.

THE HANDLE

A sleeve that slides over your paddle's flat handle: a snug 30.2 × 12.2 mm slot (the 30 × 12 mm handle plus 0.2 mm), 130 mm deep so the paddle seats fully, with a solid 5 mm base and a counterbored 3.5 mm hole that takes a low-head M3 cap screw flush. The head is solid, with both short side walls of the slot slit open at the top so the flared throat of the paddle slides in smoothly; a sealed hollow core lightens the rest. The outer shape is the same on all ten designs.

DESIGN INSPIRATION

A beehive, and the hexagonal tiles of an old bathroom floor. Six-sided pads pack with no wasted space, and the varied heights mean your fingers find a slightly different edge each time you re-grip.

WHY IT GRIPS

- 12 columns × 11 rows of pads, 10.2 mm across flats
- Four levels: 2.35 / 2.76 / 3.13 / 3.50 mm
- Gaps drop to the 1.2 mm base wall

PRINT TIP

Pads are chamfered on the lower edge so they never overhang beyond 45°.

THE WHOLE COLLECTION

The paddle in the illustration is generic, drawn with your 30 × 12 mm handle. Every design prints in any of the ten PLA colours shown on page 1. 100 % infill · 0.20 mm layers · upright, butt end down.
